Re: Docket Update 24, TSA at Luis Munoz Marin International Airport

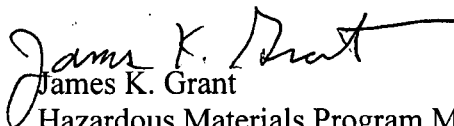

Dear Ms. Shannon:

Enclosed please find the completed questionnaire requested by your May 24, 2011 letter from EPA to TSA- Luis Munoz Marin International Airport. The enclosed compact disk contains the manifests showing disposal of hazardous wastes at an approved RCRA facility and a Manifest Disposal Summary spreadsheet. Additional manifests for the notification period are also available.

Also enclosed are three photographs of storage containers which hold consumer products in their original containers, the accumulation area, and the paved area immediately outside of the accumulation area door referred to in the questionnaire. The products, which are abandoned by passengers at TSA security screening checkpoints are consumer products in their original containers such as hair spray, deodorant, shaving cream, lighters, and consumable alcohol, which are classified with a D001 (ignitable) waste code.

If you have any questions about our submission or need additional information, please contact me.

Sincerely,

James K. Grant
